

Chroma Print | Range

Hello!

Chroma Print is a customizable fabric absorber, that allows you to reproduce quality artwork in any size.

Chroma Print is made with tensioned high-resolution printed fabric stretched over an aluminium frame that conceals the products' acoustic core and provides an all-round perfect finish.

The copyright of the images is the exclusive responsibility of the client.

Be aware that the fabric has a degree of elasticity, and that slight changes in the picture may occur, as well as slight colour variations.

Each image to be printed requires a safety margin of 15mm along its perimeter. This means that the image needs to be 30mm larger in each dimension than the target panel.

All images should comply to the following guidelines:

Image resolution: 300 dpi

Image format: JPEG, PNG, etc.

Image color mode: CMYK (Print profile: Coated FOGRA39)

 Frame Size  Image size

Image Length = Frame length + 30mm

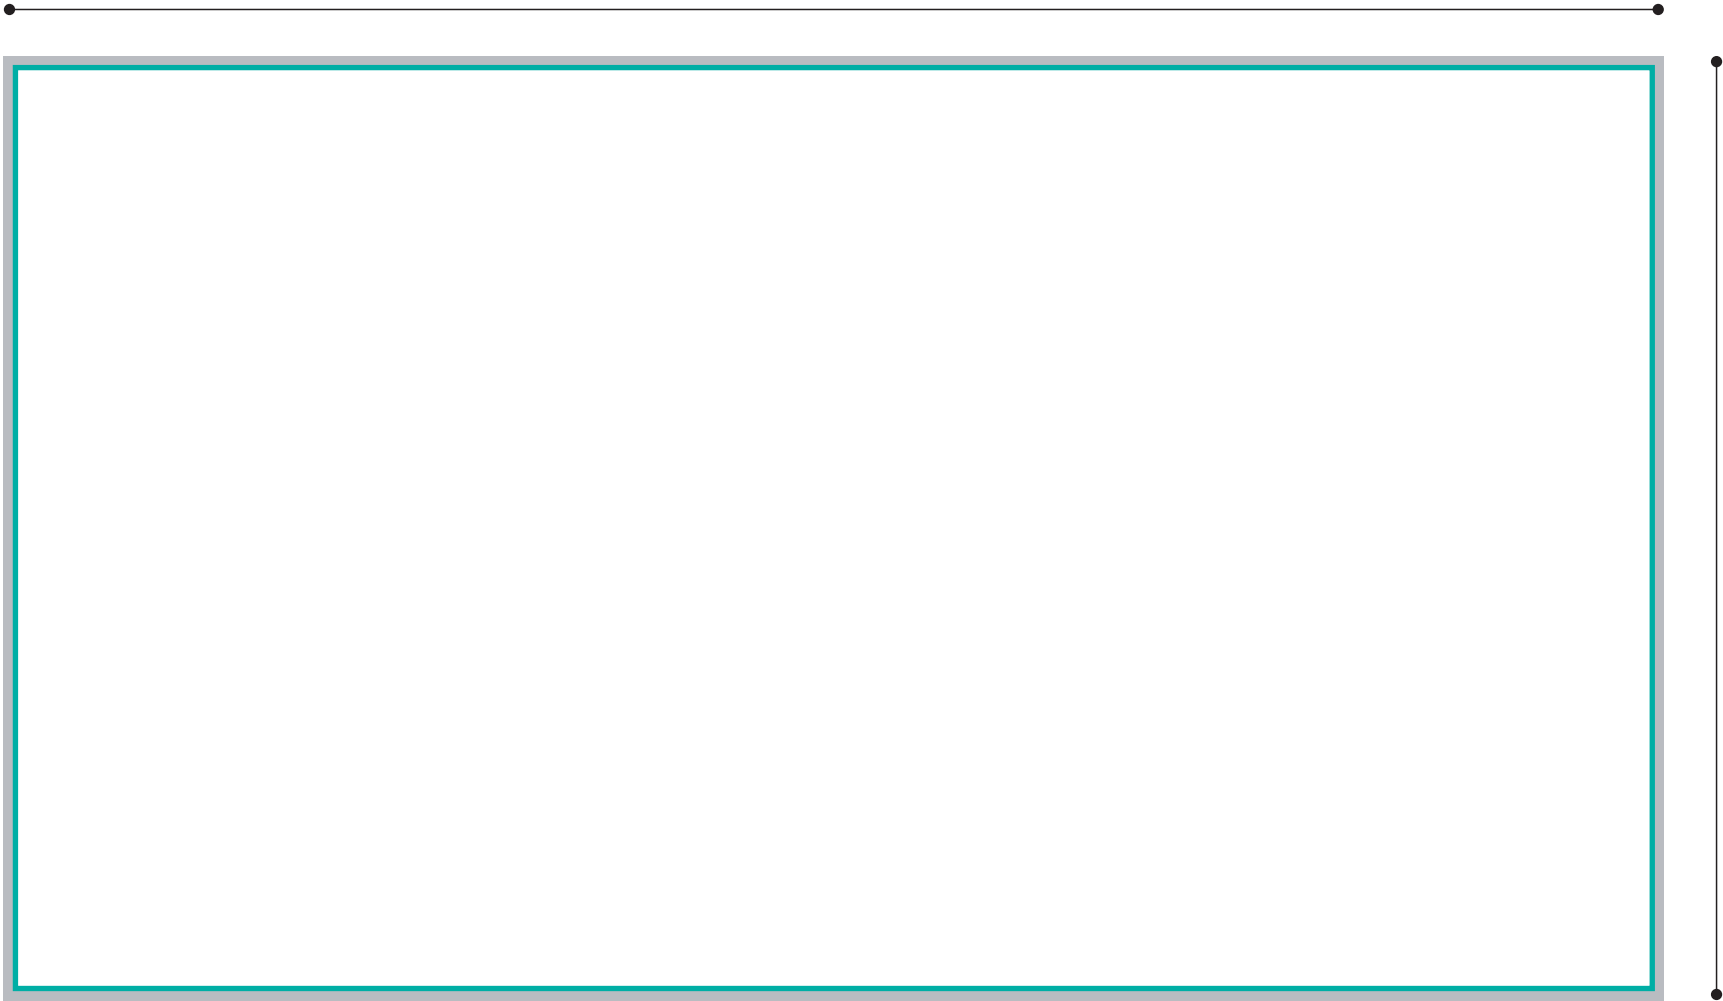

Image Width = Frame Width + 30mm
