

Mobile Producer Kit

Mobile Kits

Mobile Producer Kit is composed by 8 Mobile Wall, each with 3 Ulysses Absorber Panels

If you're a music producer or a recording artist these mobile solutions will help you create a controlled acoustic environment that allows you to work from home without compromising the quality of your output.

The 8 unit mobile wall producer kit was designed to give you complete freedom and countless layout possibilities that can adapt to different setups.

With this kit, you can treat first reflection points around the listening position whilst isolating a vocal recording with the other, or use the whole kit for a full all-round treatment if you're in the mixing phase. As a portable solution, you have the flexibility to move and reconfigure the mobile walls as needed. Thanks to their compatibility with FixArt Tube, all panels can also be easily wall-mounted whenever required.

Product Composition

Ulysses Absorber

- Suede Acoustic Fabric
- HMDF structural frame
- Calibrated Cell Acoustic Foam
