Azteka W - Bass Trap Wall

The Bass Trap Wall represents a significant upgrade in low-frequency acoustic control, designed to deliver high-performance absorption precisely where it's needed most. Constructed with dual independent cavities and featuring two finely tuned diaphragmatic membranes, the Bass Trap Wall effectively addresses low-end frequencies that are often difficult to manage.
A key component of its performance is the dual-membrane surface optimisation. The specialised polymer membrane works together with an internal absorber to achieve optimised performance. By targeting absorption specifically from 80Hz to 120Hz, it delivers exceptional results within the second and third octaves. This innovative configuration not only enhances low-frequency absorption but also allows the Bass Trap to be slimmer than ever. Combined with swappable fronts, it blends seamlessly with other acoustic treatments in the room.
