

Low frequency control is the foundation of acoustic treatment.

Strong modal frequencies can be the make-or-break of many rooms, often uncontrollable without altering room structure.

Enter the Sub Trap - a new approach on low frequency control - a fine-tuneable device with unprecedented performance.

The Sub Trap is a new category of acoustic treatment, targeting the sub-bass frequency range. It boasts the highest absorption coefficient per volume on the market.

It employs Artnovion's latest membrane technology - a symbiosis of precision engineering and material science - creating a device that can be precisely calibrate to work at the exact resonant frequency of a space.

Ulysses Sub Trap - Corner

Tuneable Pistonic Diaphragmatic Absorber

Performance

Technical Information

Features

Type:
Tuneable Pistonic Diaphragmatic Membrane Technology

Tuneable absorption range: 40 to 60 Hz
- Hz-by-Hz peak absorption tuning
- Triple Pressure acoustic core + Velocity core
- High Efficiency Bass Trap

Material:
- Acoustic fabric
- Marine grade plywood structural frame
- Calibrated cell acoustic foam

This panels can only be installed on vertical wall corners.

Dimensions:

FG - SF | 736x892x384mm

FG - WF | 736x892x384mm

Sub Trap | Range

Purpose

- Room mode control
- Bass ratio control
- Low frequency RT reduction
- Improving low frequency response
- Reducing low frequency time decay

Sub Trap performance

* Ceiling height from 2,7 to 3m

Recommended for

- Control Room
- Recording Room
- Home Studio
- Broadcast Studio
- Production Room
